Training in data recovery from mobile devices, methods and analysis

Product ID: 22231

Price: **3550.00 EUR**

Product weight: **0.00 kg**

Description:

Training in data recovery from mobile devices, methods and analysis is 5 days intensive training for institutions in organized closed groups. Course is most practical and the most extensive course in the field of data recovery in Poland, after which each participant will get comprehensive knowledge necessary for effective work. Practical classes are based on real cases, which we analyze at the training, with little support from the trainer. We believe that the most intricate and complicated knowledge that is properly taught is understandable to everyone. Case analysis will give you confidence in solving cases in an independent analysis in the future. The lectured content is individually matched to the participants' knowledge.

The training, due to the great emphasis on gaining PRACTICAL knowledge, is carried out in a fully equipped training room, in which every student has at their disposal an expertly equipped engineer's position in the field of data recovery in the ratio of 1:1.
